OverTheWire: Wargames-Bandit:

1. Level8-9:
   a. Used the command "ls" and only one find called "data.txt" was available.
   b. The problem said that the password is the only line of text that occurs only once, so I started looking for information about the "sort" and "uniq" commands.
   c. After research I used the command "sort data.txt | uniq -u" and found the unique line since the command sorts the file first and then "uniq" eliminates adjacent repeated lines and got the password.
